AI BUILDFEST 2026 · TRACK 3 · CASE STUDY 2

ChatGPT waits for you. Reca comes first.

The active memory companion for WAEC & JAMB students — on WhatsApp.

Live · https://reca-study-companion.vercel.app

THE PROBLEM

Students study hard. Then they forget what mattered.

Millions of Nigerian candidates prepare alone after school. They reread notes — but they don't know what they've actually lost.

~1.95M
WASSCE candidates (2026 cycle)

~2.24M
JAMB UTME registrations

61.5%
credit pass incl. Eng + Maths — pressure, not certainty

WHY NOT "JUST USE CHATGPT"?

Passive memory is not enough.

CLAUDE / CHATGPT

- Explain when you ask
- Remember when you return
- You open another app
- No exam-triggered follow-up

RECA

- Explain → quiz → grade
- Remembers what you got wrong
- Messages you first on WhatsApp
- WAEC/JAMB-framed practice

THE SOLUTION

Reca — study companion that returns on its own.

A student sends a topic (or a past-question photo). Reca explains in plain exam language, asks two quick questions, grades instantly — then resurfaces weak spots unprompted.

No new app. No dashboard homework. WhatsApp is already the habit.

FUNCTIONALITY & EXECUTION

One loop. Built end-to-end.

01
Capture

02
Explain

03
Quiz + grade

HERO
Unprompted resurface

05
Recap / briefing

Web + WhatsApp sync · Learn / Revise / Progress · 10 subjects · photo past-question path · shipped on Meta Cloud API + Gemini with preset fallback.

Working product, not a mock

USE OF AI

AI that teaches — then remembers.

GENERATION

Gemini explains WAEC/JAMB topics in plain language, builds 2 practice questions, grades answers, and can read a past-question photo.

MEMORY DECISION

Wrong answers schedule a follow-up. Reca decides *when* to return — the student doesn't open the chat to dig it up.

Preset curriculum bank keeps the demo reliable if the model is offline. AI is the teacher; spaced recall is the product.

IMPACT & USEFULNESS

Built for how Nigerian students already study.

- ✓ After-school phone habit — not an in-school laptop fantasy
- ✓ Zero download friction on the channel they already use
- ✓ Turns “I read it” into “I still know it”
- ✓ Free-tier stack so a pilot doesn’t require paid infrastructure day one

LIVE LINK & DEMO

Try the product. Watch the aha.

Web companion (same memory loop): open Learn → ask a topic → miss one question → Reca comes back. WhatsApp is the stage hero — Reca messages first.

https://reca-study-companion.vercel.app/signup.html →

Demo script: explain photosynthesis → wrong Q1 → unprompted resurface → chloroplast

Guest mode available

WHY WE BUILT RECA

Because explanations without follow-up still leave students alone.

We didn’t set out to build “another chatbot.” We set out to close the gap between understanding a topic tonight and still owning it on exam day — on the phone students already hold after school.

AI BuildFest gave us two days. We shipped the full loop on a free stack — and the hero is still that unprompted return.

WHAT'S NEXT

Pilot with real students. Expand the syllabus. Keep coming first.

NOW

Working loop on WhatsApp + web. Live link ready for judges.

NEXT

School / tutorial pilots · teacher progress view · broader WAEC subject coverage.

Claude waits for you. **Reca comes first.**
